

1) Create A new component which have news title(should print as h2), news detail(<p>), published date, source create this component using sling model.

Create clientlibs for news component and

Apply Green colour to the heading(h2) and yellow colour to news detail(<p>) and date should be black in colour.

Create a base page component and add new file as metadata so that it can print og:title, og:description and og:image link that file in base page.html

What is extraclientlib add it this multi field component?

In AEM, extraClientLibs is used in a component dialog to load additional client-side libraries (JS/CSS) when the dialog is opened. It helps enhance dialog behavior, especially for complex fields like multifield. You set this property in the cq:dialog node and link it to a client library category. This ensures any custom scripts or styles are available when authors use the dialog. It's useful for adding validation, UI enhancements, or custom logic to multifields.
